Army Corps of Engineers begins stream, wetland study of Little Loyalsock

Baltimore - The U.S. Army Corps of Engineers, Baltimore District, in partnership with the Borough of Dushore, Pa., has begun a study of the Little Loyalsock Creek in and around the Borough. The goal of this study is to develop a project to restore the stream and wetland systems of the area.

The study will also investigate other potential project components, such as the enhancement of Kast's Pond and the reconstruction of another pond in the Borough that washed out during a storm years ago.

Fieldwork related to the study will be started the week of Sept. 23rd. Workers will be at the study sites collecting baseline environmental and engineering data.

The first public meeting for the project is tentatively scheduled for this fall. Date and time of the meeting will be announced.

The study is authorized by Section 206 of the Water Resources Development Act.
